

Boneprox joins NVIDIA Inception

Boneprox announced today that they have joined the, [NVIDIA Inception](#), a program designed to nurture startups revolutionizing industries with advancements in AI and data sciences.

Through Boneprox's patented AI-analysis of already existing data, e.g. dental x-ray systemic diseases can be identified at an earlier stage. This will result in proactive treatments and better quality of life for the patient and their families.

NVIDIA Inception will allow Boneprox to accelerate ongoing R&D projects that will help and improve the dental and healthcare sectors through high performance algorithms built with NVIDIA's tech assistance, reach out to the target market and train models on the high acceleration GPUs. This e-program will also offer Boneprox the opportunity to collaborate with industry-leading experts and other AI-focused organizations.

Boneprox believes that with a keen interest in the field, genuine desire to help others and a commitment to continuously learn reinforces its passion to work for the healthcare sector.

Boneprox joined the NVIDIA Inception program with the goal to enhance and train deep neural networks on the high performance GPUs and to use the NVIDIA Deep Learning Institute (DLI) platform to create a talent pool with different courses that could potentially benefit employees. Through the collaboration with NVIDIA, Boneprox would develop algorithms that will not only help the dental care but also create a more personal experience for the patients.

"NVIDIA is a revolutionary brand and offers us potential in all the markets we serve. The various technologies and functionality will strengthen our core offering and further define our footprints in the healthcare sector - Shreya Desai , Head of Machine Learning"

NVIDIA Inception is a program that helps startups during critical stages of product development, prototyping and deployment. Every Inception member gets a custom set of ongoing benefits, such as DLI credits, marketing support and technology assistance, which provides startups with essential tools to help them grow.

The team behind Boneprox has found a way to bridge the gap between health and dental care by making dentists an important instance to early diagnose diseases through A.I analysis of dental x-rays. In addition to their AI analyses, Boneprox has built a SaaS-platform where dentists get access to specialists. This solution supports an immediate resource of diagnose and treatment for other diseases, such as oral cancer.
